Dear Sir;

This letter is concerning the propose rule on Trans fatty acids and making them part of food labeling. I feel that this is a very good idea and should be put into place. As a consumer and Nutrition student I know the value of food labeling we all need to be aware of what goes into the food we consume. High cholesterol is a problem in some diets and Trans fatty acids have been reported to contribute to LDL cholesterol levels. If the average consumer were made aware of the amount of Trans fatty acid in the foods he would have of better way of controlling his intake. I believe that the addition to the food label of the amount of Trans fatty acids to the labeling is very important. I hope you will promote this and make this information available to the average consumer.

Thank you

Kathryn Mason
